

AI SHARK TANK — PITCH REPORT

25/6/2026, 7:44:26 pm

AI Career Intelligence Platform

Generated by the AI Shark Tank Simulator — entertainment & pitch-practice tool, not real investment advice.

The Pitch

Problem Statement:

India needs 1 million AI professionals by 2026, but job seekers are completely lost. They rely on fragmented YouTube tutorials or expensive Rs. 2-4L bootcamps with uncertain ROI. There is no single system connecting skill-gap diagnosis to learning paths and job matching. Generic resumes get filtered out by ATS, leaving freshers and SDEs anxious and stuck.

Solution:

We close the full loop for India's GenAI job market. The platform diagnoses exact skill gaps against live Indian job postings, generates a personalized 90-day upskilling roadmap, and auto-produces recruiter-ready, AI-tailored applications. It's the fastest path from current skills to an Agentic AI role, at 1/10th the cost of a bootcamp.

Revenue Model:

Freemium top-of-funnel with a free diagnostic quiz. Monetization relies on a Rs. 1,999-2,999 one-time "Sprint Pack" (quick win) and a Rs. 499-999/month Pro subscription for ongoing tracking. Future expansion includes B2B licensing for GCC HR teams.

Target Audience:

Primary ICP: 22-29 year-old Indian engineers (SDE-1/2, 0-3 yrs exp, Rs. 5-12 LPA) in tech hubs wanting to pivot into GenAI/Agentic AI. Secondary segments include 28-35 year old non-CS professionals and Tier-II engineering students.

Funding Ask:

150,00,000 for 10% equity (Pre-seed round to build our India job-board data

The Scorecard

Cross-Examination Transcript

Vikram Cross (The Venture Capitalist): How does AI Career Intelligence Platform scale past your first wave of Primary ICP: 22-29 year-old Indian engineers (SDE-1/2, 0-3 yrs exp, Rs. 5-12 LPA) in tech hubs wanting to pivot into GenAI/Agentic AI. Secondary segments include 28-35 year old non-CS professionals and Tier-II engineering students. without breaking?

You: Vikram, our expansion scales seamlessly through a 3-step playbook without breaking infrastructure:

1. Segment Expansion: We move from tech hubs to Tier-2/3 students and non-CS pivots (28-35), who already represent 25% of AI learners. Our automated diagnostic layer scales infinitely with zero human overhead.

2. B2B GCC Monetization: We scale revenue horizontally by licensing our vetted talent pipeline and skill-gap analytics directly to Indian tech HR teams and GCCs.

3. Geo Expansion: Within 18 months, we replicate this data flywheel across Southeast Asia and the US/UK Indian diaspora.

Mason Reyes (The Founder): Walk me through how you'd actually build and ship We close the full loop for India's GenAI job market. The platform diagnoses exact skill gaps against live Indian job postings, generates a personalized 90-day upskilling roadmap, and auto-produces recruiter-ready, AI-tailored applications. It's the fastest path from current skills to an Agentic AI role, at 1/10th the cost of a bootcamp. in the next 90 days.

You: Mason, we ship lean and let user traction dictate the engineering.

Days 1-30: Smoke-test MVP. We launch a Typeform diagnostic with manual LLM prompting to validate the loop and secure our first 15+ paying users.

Days 31-60: Core Automation. We build the web app with LLM API orchestration to completely automate the roadmap and resume tailoring loops.

Days 61-90: Data Moat. We build live scrapers for Naukri and Foundit data feeds, feeding real-time hiring demand directly into the roadmap engine to open full beta.

Priya Nandan (The Customer): Would I tell a friend about this, or just quietly stop using it after a week?

You: Priya, you will actually trigger their FOMO. Our entire customer journey is completely built on peer validation. The absolute biggest buying trigger for our users is seeing a college friend land a high paying AI role. We bake a one click WhatsApp share button directly into your roadmap output and incentivize referrals with premium upgrades. You will not drop off after a week because this is not a static course. You will come back weekly to track live job matches and update your progress until you get that interview callback.

Walter Sinclair (The Angel Investor): If I gave you this money today, what's the very first dollar you'd spend it on?

You: Walter, the very first dollar goes directly into building our live job board data feeds integrating with Naukri and Foundit. That localized data is our core defensible moat against global players and free tools. The second dollar goes into targeted YouTube ads to acquire users outside my personal network and strictly prove our Customer Acquisition Cost. We need to validate that our 1999 rupee Sprint Pack converts cold traffic profitably. Once we lock in that CAC to return ratio, we pour fuel on the fire and scale rapidly.

Vikram Cross (The Venture Capitalist): If a well-funded competitor copies AI Career Intelligence Platform next quarter, what stops you from getting crushed?

You: Vikram, a copycat can steal features, but they can't replicate our three-layered moat overnight. First, our live Indian job-board data integration creates a localized feedback loop that global tools lack. Second, we own community trust within ecosystems like IndiaAI, driving zero-CAC organic referrals. Third, and most importantly, our core moat is outcome evidence. Once our early users start posting real interview callbacks and job offers, that compounding social proof creates a trust barrier that no amount of competitor ad spend can buy.

Mason Reyes (The Founder): If your co-founder quit tomorrow, could you still ship this alone?

You: Mason, I absolutely could, because I am already driving the core execution. I possess deep technical capability in LLM orchestration and unmatched domain experience. The initial 30 day MVP relies entirely on a lean

stack using tools like Carrd and Google Forms combined with my own manual prompting. I do not need a massive engineering team to validate willingness to pay. Once our 1999 rupee Sprint Pack is proven with the first 15 paying users, I can easily hire extra bandwidth. I have the authentic founder market fit to ship this entirely alone.

Priya Nandan (The Customer): As someone who'd actually use this — why would I choose AI Career Intelligence Platform over doing nothing, or a free alternative?

You: Priya, doing nothing leaves you stuck while your peers land AI roles with massive salary hikes. Free tools like ChatGPT are chaotic specifically because they lack live Indian job market data and a structured roadmap. Our plan closes the entire loop. We diagnose your exact skill gaps against live Naukri postings, build a personalized 90 day roadmap, and generate recruiter ready resumes. You choose us because we turn hours of manual research into a precise execution plan for just 1999 rupees, saving you from an expensive 3 lakh bootcamp.

Walter Sinclair (The Angel Investor): Your revenue model is Freemium top-of-funnel with a free diagnostic quiz. Monetization relies on a Rs. 1,999-2,999 one-time "Sprint Pack" (quick win) and a Rs. 499-999/month Pro subscription for ongoing tracking. Future expansion includes B2B licensing for GCC HR teams. — when do you actually become profitable, and on what assumptions?

You: Walter, we reach profitability within the first six months. Our core assumption is hitting a 15 percent conversion rate from our free diagnostic users to the 1999 rupee Sprint Pack. Because we leverage organic community loops like IndiaAI and peer WhatsApp sharing, our customer acquisition cost stays near zero. Our main variable expense is LLM API costs which we tightly control by never offering unlimited free tiers. Once we validate the API cost per user in our 30 day test, every Sprint Pack sold becomes highly profitable.

The Verdict

ACQUISITION OFFER!

This isn't an invest-and-wait pitch — it's a buy-it-now pitch. With a 93/100 overall score, the panel wants to acquire AI Career Intelligence Platform directly for roughly ¹4.43 Cr.

Acquisition Price: ¹4.43 Cr

Final Word From The Panel

Vikram Cross:

87/100 on market size. That's the kind of total addressable market that makes a VC's year.

Mason Reyes:

Execution scored 96/100 — you talk like someone who actually ships.

Priya Nandan:

87/100. I'd tell my friends about this, and that's rare.

Walter Sinclair:

97/100 on the model. I can see my return from here.
