SECTION 1 — EXECUTIVE SUMMARY

Startup Snapshot — 10 Key Bullets

- **Product:** An AI-powered career platform for India's GenAI job market — diagnoses skill gaps, generates personalised upskilling roadmaps, and produces AI-tailored resumes and cover letters for Prompt Engineering, AI/ML, and Agentic AI roles.
- **Target Market:** 22–29 year-old Indian engineers (SDE-1/2, 0–3 yrs exp, Rs. 5–12 LPA) in Bengaluru, Delhi NCR, Mumbai, Hyderabad, Pune — with expansion to Tier-II cities and non-CS pivots.
- **Market Demand:** 1M+ AI roles needed by 2026 in India; agentic-AI job postings up 300% (Jan '25–Mar '26); 89% of Indian professionals actively upskilling — macro tailwind is strong.
- **Core Loop:** Free skill-gap diagnostic → Personalised roadmap → AI-tailored resume/CL → Job-match tracking → Outcome evidence → Referral. No incumbent closes this full loop for India's GenAI niche.
- **Pricing Hypothesis:** Freemium (free diagnostic) + Paid tier Rs. 499–999/month or Rs. 1,999–2,999 one-time sprint — anchored well below Rs. 2–4L bootcamp alternatives.
- **Validation Score:** Conditional Go (3.65/5.0 weighted). Strong market-level demand and founder-market fit (7.1/10) confirmed; willingness-to-pay and primary validation outside founder's network remain untested.
- **Competition:** Fragmented across 4 layers (global AI job tools, India upskilling platforms, job boards, free communities). No player closes diagnose→roadmap→match→apply for India's Agentic AI niche.
- **Biggest Risk:** Free substitutes (ChatGPT + YouTube) eroding willingness-to-pay. Differentiation must be on closed-loop outcomes + live India job-market data, not convenience.
- **MVP:** 30-day smoke-test — skill-gap quiz, 10–15 hand-crafted resume/CL samples, landing page + waitlist, real payment ask (deposit/pre-order). Gate: ≥15% of activated users willing to pay.
- **Founder Edge:** Deep domain familiarity with India's AI hiring landscape; side-project bandwidth risk is the constraint — 30-day plan forces a hard go/no-go decision before full-time commitment.

Key Assumptions Extracted from Blueprint

Category	Assumption	Evidence Level	Risk
Customer	ICP (age 22–29, SDE-1/2, 0–3 yrs) is the primary paying segment	Medium — ICP defined, no primary research outside founder network	Medium
MVP	Skill-gap diagnostic → roadmap is the core value delivery mechanism	Low — assumed, not yet validated with target users	High
Value Prop	Closed-loop (diagnose→roadmap→apply) beats raw ChatGPT for this user	Low — product not yet built or tested	High
Pricing	Rs. 499–999/month OR Rs. 1,999–2,999 one-time sprint	Low — hypothesised only; not yet tested with real payment ask	Critical
Revenue	Freemium → paid conversion ≥15% of activated users	Low — benchmark; not yet measured	High
GTM	LinkedIn + community posts (IndiaAI, Reddit r/developersIndia) drive organic signups	Low — unproven distribution	High
Moat	India-specific job-board integrations + community trust are slow to replicate	Medium — directionally correct but not built yet	Medium

Category	Assumption	Evidence Level	Risk
Scale	B2B HR/GCC licensing is a longer-term revenue layer	Low — distant horizon; not validated	Low (now)

SECTION 2 — BUSINESS REALITY CHECK

Who Pays & Why

Segment	Who	Why They Pay	WTP Signal
Primary	SDE-1/2, 0–3 yrs, Rs. 5–12 LPA — 'Rohan Sharma' archetype	FOMO from peers landing AI roles; structured path cheaper and faster than a Rs. 3L bootcamp; tangible output (resume, roadmap) within minutes	Cautious — burned by past bootcamp; needs proof of ROI before paying
Secondary	Tier-2/3 final-year engineering students	Job placement anxiety at graduation; no structured AI learning path; price-sensitive but outcome-motivated	Low WTP individually; high volume potential
Secondary	Non-tech professionals (28–35) pivoting into GenAI	Career change urgency; willing to pay for clarity and credibility	Potentially higher WTP — bigger career stakes
B2B (future)	GCC HR / Talent Acquisition teams	Reduce time-to-screen AI candidates; standardise AI skill assessment	High ARPU but 6–12 month sales cycle; not MVP scope

How Will They Discover the Product?

Channel	Mechanism	Realistic CAC	Evidence
LinkedIn organic	Founder posts, community shares, peer testimonials triggering FOMO-driven discovery	Near-zero (founder time)	Unproven — assumed but not tested
IndiaAI + r/developersIndia	Community seeding with value-first posts; diagnostic as lead magnet	Near-zero	Directionally correct; no data yet
Peer referral (WhatsApp groups)	Rohan's trigger is a friend's LinkedIn success post — same channel for referral	Near-zero marginal	Highest conviction channel — matches buyer psychology
YouTube / Instagram paid ads	Targeted ads to AI upskilling content consumers	Rs. 200–500/signup (estimated)	Unproven; needs budget and testing
SEO / content	Long-tail: 'how to become agentic AI developer India', 'LangChain jobs India'	Near-zero (long-term)	3–6 month lag; not useful for 30-day gate

Top Growth & Monetisation Risks

Risk	Type	Likelihood	Impact	Mitigation
ChatGPT/YouTube replace WTP	Monetisation	High	Critical	Prove outcome lift (interview callbacks) that raw ChatGPT can't replicate
Founder bandwidth — side project drift	Execution	High	High	30-day plan forces binary decision; set a hard deadline for full-time or stop
No distribution breakthrough	GTM	High	High	Test 3 channels in parallel in Week 1; double down on fastest-converting

Risk	Type	Likelihood	Impact	Mitigation
Conversion <5% — pricing rejected	Revenue	Medium	Critical	Test real deposit ask (not stated interest) with at least 50 activated users before deciding
Global AI tools localise to India	Competitive	Medium	High	Build India job-board integrations and community trust fast; these are slow for global players
LLM API costs scale vs revenue	Unit Economics	Medium	Medium	Validate ARPU vs cost per user together in 30-day sprint before unlimited free tiers
Privacy/DPDP Act compliance gap	Legal	Low	High	Build explicit consent flow from Day 1; cheap insurance against later friction

Weak Assumptions That Must Be Validated First

- **WTP is REAL, not stated:** The most dangerous assumption. 'I would pay' from an interview is not the same as handing over money. Run a real deposit/pre-order ask in Week 3 — not a survey.
- **Free diagnostic creates enough 'wow' to convert:** The skill-gap quiz must deliver an immediately useful result that a user couldn't get in 2 minutes on ChatGPT. Validate this in Week 2 with live user sessions.
- **Community distribution actually works at scale:** Organic seeding in IndiaAI and Reddit works for the first 50 users. Beyond that, the founder needs a repeatable, scalable channel — not just personal network reach.
- **The India job-board data advantage is real:** The closed-loop moat requires live Naukri/Foundit integration. Until that exists, the product is effectively a better-formatted ChatGPT. Build the feed in Week 2.
- **Non-CS/Tier-II can activate and convert:** The blueprint counts this segment as 25% of learners but onboarding logic hasn't been designed for them. Test a dedicated non-CS flow in parallel from Week 1.

SECTION 3 — BUSINESS STRATEGY REPORT

3.1 Business Model Canvas

Key Partners	Key Activities	Value Proposition	Customer Relationships	Customer Segments
• Naukri / Foundit (job data) • LLM providers (OpenAI/Anthropic) • IndiaAI community • LinkedIn (distribution) • Future: GCCs / HR teams	• Skill-gap diagnostic engine • Roadmap generation (AI+human) • Resume/CL tailoring • Job-match tracking • Outcome evidence collection	Close the full diagnose→roadmap→match→apply loop for India's GenAI job market at 1/10th the cost of a bootcamp, with live job-market data and proof it works.	• Self-serve freemium • Community cohorts • Email/WhatsApp nudges • Outcome testimonials • Human review add-on	• SDE-1/2 (0–3 yrs) → primary • Final-year engg students • Non-CS pivots (28–35) • B2B HR/GCCs (future)
Key Resources	Channels		Cost Structure	Revenue Streams
• LLM API access • India job-board data feed • Founder domain expertise • Beta user testimonials • DPDP-compliant data infra	• LinkedIn organic • IndiaAI + Reddit communities • Peer referral (WhatsApp) • YouTube/Instagram paid ads • SEO (long-term)		• LLM API costs (variable) • Job-board data licensing • Founder time (primary) • Landing page + tooling • Paid ads (test budget)	• Freemium (free diagnostic) • Rs. 499–999/mo subscription • Rs. 1,999–2,999 sprint pack • Future: B2B licensing

3.2 Revenue & Pricing Strategy

Tier	Price	Offering	Target	Month-1 Hypothesis
Free	Rs. 0	Skill-gap diagnostic + generic roadmap	All ICP — top-of-funnel	70–80% of signups stay free; primary lead capture
Starter / Sprint	Rs. 1,999–2,999 one-time	Personalised roadmap + 3 AI-tailored resumes/CLs + job-match tracking for 30 days	High-intent users who want a quick sprint	Test first; lower commitment, easier first payment
Pro Monthly	Rs. 499–999/mo	Everything in Sprint + unlimited resume tailoring + weekly roadmap tracking + job alerts	Ongoing job-seekers; 3–6 month horizon	Higher ARPU but harder to convert without proof
Cohort / Human Layer	Rs. 4,999–9,999 / cohort	Group coaching + peer accountability + human resume review	Premium segment; 25–35 year olds with higher stakes	Validate demand before building; future only
B2B / GCC	Rs. 50K–2L / seat or license	Bulk skill assessment + candidate pipeline for AI roles	GCC HR teams	12–18 month horizon; not MVP scope

Pricing recommendation: Lead with the Rs. 1,999 Sprint Pack in Week 3 — it's a one-time commitment (lower barrier than a subscription), delivers a clear scoped outcome (30 days), and is easy to refund if trust fails. Use the monthly subscription as an upgrade path once the first sprint delivers a result. Do NOT launch unlimited free tiers until LLM API costs per user are validated.

3.3 Go-To-Market Strategy

Phase	Timeline	Goal	Key Actions	Success Signal
0 — Setup	Days 1–3	Infrastructure ready	Landing page live + waitlist; DPDP consent flow; Google Form diagnostic v0; community accounts created	Page live; tracking set up
1 — Seeding	Days 4–10	50+ waitlist signups	Value-first posts in IndiaAI, r/developersIndia, LinkedIn; founder shares 'how I mapped GenAI skills to open roles' post; DM 20 non-network interviewees	50 signups; 10 diagnostic completions
2 — Smoke Test	Days 11–21	20+ diagnostic completions; first payment signal	Launch to waitlist; hand-craft 10–15 resume/CL samples; introduce Rs. 1,999 Sprint deposit ask to activated users; track drop-off	20 completions; ≥3 deposits
3 — Decide	Days 22–30	Go / No-Go	Compile conversion data vs. thresholds; analyse qualitative trust signals; make full-time or pivot decision	≥15% WTP rate → Go

3.4 Customer Acquisition Strategy

Channel	Tactic	Est. CAC	Volume Potential	Priorit y
WhatsApp peer referral	Build a 'share your result' CTA into the diagnostic output; one-click share to WhatsApp groups	~Rs. 0	High (viral loops in engg groups)	★★★★★
LinkedIn content	Founder posts 3x/week: job market data, skill-gap analysis, before/after resume examples	~Rs. 0 (time)	Medium	★★★★■
IndiaAI / Reddit	Weekly value post; diagnostic as free lead magnet; answer AI career questions with tool link	~Rs. 0 (time)	Medium	★★★★■
YouTube ads (retargeting)	Target viewers of LangChain/CrewAI tutorials; 15-sec 'get your free skill gap diagnosis' ad	Rs. 300–600/signup	High (scalable)	★★★★■ ■ (test Week 3+)
SEO / blog	'How to become Agentic AI developer India 2026' — target 3–5 high-intent long-tail keywords	~Rs. 0 (long-term)	Medium (3–6 mo lag)	★★★██ █ (start now)
College placement cells	Partnership with placement officers at Tier-2 engg colleges; free diagnostic for final-year batch	Rs. 50–200/user	High (seasonal spike)	★★★★■ ■ (Month 2+)

3.5 First 100 Users Plan

Users	Source	Method	Timeline	KPI
1–10	Founder's extended (not immediate) network	Personal outreach to ex-colleagues, LinkedIn connections 2nd-degree; offer free diagnostic + feedback call	Day 1–5	10 diagnostic completions; raw qualitative feedback
11–30	IndiaAI + r/developersIndia	1–2 value-first posts with free diagnostic link; respond to every comment personally	Day 5–10	20 new signups; 10+ diagnostic completions
31–60	LinkedIn content + waitlist	Founder posts AI job market data with diagnostic CTA; email waitlist with personalised invite	Day 10–18	30 activations; 5 Sprint Pack deposit asks
61–100	Referral from early users	Build 'share your roadmap' CTA into the output; WhatsApp-friendly share card; incentivise with 1 free upgrade for each successful referral	Day 18–30	40 referred signups; ≥15 paying users (for Go signal)

3.6 Competitive Position & Moat

Competitor	Strength	Weakness vs. This Product	Moat Risk
ChatGPT / Claude (free)	Zero cost; already in user workflow; highly capable	No live India job data; no tracked roadmap; no closed loop; user does all the work	High — must prove structured output + outcome data beats DIY
YouTube / Twitter AI content	Free; expert creators; large audience	No personalisation; no accountability; no resume output; no job matching	Medium — complements, doesn't replace, if product delivers outcomes
Coursera / UpGrad / Scaler	Brand trust; structured curriculum; placement support	Rs. 2–4L cost; curriculum, not a job-application tool; slow; broad, not India-GenAI specific	Medium — can partner; position as execution layer not curriculum
Simplify / LazyApply (global)	Auto-apply at scale; resume tailoring	Not India-specific; no roadmap; no skill diagnosis; no Naukri/Foundit integration	Medium — they can localise fast; must build India moat quickly
Naukri / Foundit	Dominant India job board; massive database	No skill diagnosis; no roadmap; generic resume builder; not AI/GenAI specific	Low — potential distribution partner, not a competitor for this niche
LinkedIn Learning	Global brand; LinkedIn integration	Generic content; no India-AI specific roadmap; no resume tailoring; no job-match loop	Low — different use case

Moat Building Priority: (1) Outcome evidence (interview callbacks, role offers) → hardest to fake, most powerful trust signal. (2) Live India job-board data integration → creates a data flywheel incumbents can't replicate fast. (3) Community trust in IndiaAI ecosystem → social proof that is slow for global players to acquire.

3.7 Reverse SWOT Analysis

(What could go right that we're underestimating? What could go wrong that we're ignoring?)

Underestimated Upside (Hidden Strengths)	Overestimated Advantage (Blind Spots)
• Non-CS pivots (28–35) may have HIGHER WTP than the primary ICP — career stakes are larger and they have more income to spend on career tools • B2B GCC licensing could arrive sooner than expected if one large GCC uses the tool informally and formalises it • Outcome evidence (first 5 interview callbacks) creates a compounding trust loop that dramatically lowers CAC • Agentic AI job growth may accelerate even faster than projected — the 30-day plan may underestimate urgency	• 'No one closes the full loop' may not last — Simplify or a well-funded Indian startup could ship an India-specific version within 3–6 months • LinkedIn organic reach is often overestimated by founders who have active networks; a cold account with no followers will struggle • The skill-gap quiz quality risk: a mediocre quiz delivers a mediocre roadmap — users will compare the output to a 5-minute ChatGPT prompt and find it lacking • Founder-market fit score (7.1/10) is self-assessed — true distribution moat remains unproven
Underestimated Risk (Hidden Threats)	Overestimated Risk (Not Actually That Scary)
• Resume fraud perception: if 3–5 users publicly claim AI-written resumes are being rejected or flagged, the product's core value proposition collapses overnight • DPDP Act enforcement: India's data protection law is new and enforcement is evolving — a public breach or complaint could be fatal for a trust-dependent product • LLM API cost at scale: a 'free diagnostic for everyone' model with heavy GPT-4o usage could lose money on every free user if conversion rates are low	• Well-funded incumbents (Coursera, UpGrad) adding similar tooling: they move slowly; their core business is curriculum, not execution tools • Naukri entering this space: more likely a distribution partner than a competitor • Investors not interested: the 30-day gate is about customer validation, not investor interest — funding follows proof, not the reverse

3.8 Investor One-Liner & 30-Second Pitch

"For India's 1M+ aspiring GenAI engineers, we are the only platform that closes the full diagnose→roadmap→apply loop — delivering a personalised skill-gap diagnosis, a live-data-backed upskilling roadmap, and AI-tailored job applications for Agentic AI roles at 1/10th the cost of a bootcamp."

30-Second Founder Pitch:

"India needs 1 million AI engineers by 2026. Agentic AI job postings are up 300% in 15 months. But 89% of Indian engineers trying to break into GenAI roles are stuck — they don't know which skills matter, their resumes get filtered by ATS, and the only options are free chaos (ChatGPT + YouTube) or Rs. 3-lakh bootcamps with no guaranteed outcome.

We built the missing layer: a platform that diagnoses your exact skill gap against live India job postings, generates a personalised 90-day roadmap, and produces recruiter-ready, AI-tailored applications in minutes — not weeks. No curriculum. No lectures. Just the fastest path from where you are to the job you want.

We're 30 days into validation. First diagnostic completions are live. We're running a real payment ask next week. If $\geq 15\%$ of activated users pay, we go full-time. Join us before the window closes."

3.9 Founder Action Sheet — Top 10 Next Actions

1	TODAY	Publish the single-page landing site with waitlist and diagnostic CTA. Use Carrd, Framer, or Notion — speed beats polish at this stage. Track signups from Day 1.
2	TODAY	Recruit 20–25 interviewees OUTSIDE your personal network. Target LinkedIn 2nd-degree, IndiaAI Discord, r/developersIndia. Include 3–5 non-CS pivots and 3–5 Tier-2 students.
3	DAY 2–3	Build the skill-gap diagnostic v0 as a Google Form or Typeform. Map 10–15 questions to GenAI/Agentic AI job requirements from live Naukri/Foundit postings — not assumed requirements.
4	DAY 3–5	Hand-craft 10–15 tailored resume/CL samples using real anonymised job descriptions. These are your proof-of-concept outputs — make them genuinely better than a ChatGPT prompt.
5	DAY 4–5	Post a value-first piece of content in IndiaAI + r/developersIndia + LinkedIn. Share a real analysis: 'I mapped 50 Agentic AI job posts on Naukri — here are the 7 skills that appeared in 80% of JDs'. Link to the diagnostic.
6	DAY 5–7	Run 5 live user sessions with diagnostic v0. Watch over Zoom/Google Meet. Count how many times they say 'I didn't know that' or 'this is exactly what I needed' — that's your product-signal gauge.
7	DAY 7–10	Define and document 3 pricing concepts (Free, Rs. 1,999 Sprint, Rs. 699/mo). Test them directly in interviews — show the concepts, watch the reaction, ask 'what would make this worth paying for today?'
8	DAY 14–18	Launch the smoke-test MVP to your waitlist. Target 100+ signups and 20+ full diagnostic completions by end of Week 3. Track every drop-off point in the funnel.
9	DAY 18–21	Introduce a REAL payment ask — not a survey. Offer the Rs. 1,999 Sprint Pack to activated users with a 7-day money-back guarantee. Collect actual payments or deposits. This is the only signal that matters.
10	DAY 28–30	Compile all conversion data against thresholds ($\geq 15\%$ WTP, $\geq 25\%$ activation). Write a 1-page Go/No-Go memo. If Go: quit or negotiate part-time and set a 90-day full-product milestone. If No-Go: identify the one thing that would change the verdict and test only that.

SECTION 4 — INVESTMENT SCORECARD

Dimension Scores & Rationale

Business Viability

62

/100

Real market demand and a genuine product gap exist. Founder-market fit is strong (7.1/10). Core risk: no primary validation outside founder network and willingness-to-pay is entirely untested. The 30-day gate addresses this directly, but the clock is ticking.

Revenue Potential

68

/100

India's GenAI job market is massive and fast-growing (1M+ roles, 300% Agentic AI posting growth). The pricing model (Rs. 499–2,999) is viable if conversion rates hit ≥15%. B2B GCC licensing represents a meaningful ARPU expansion. Risk: free substitutes compress ceiling.

GTM Strength

52

/100

Channels are identified (LinkedIn, IndiaAI, Reddit) but entirely unproven. Distribution is the single weakest element of the plan. The WhatsApp peer referral loop is high-conviction but unbuilt. No paid channel has been tested. The plan needs a real distribution breakthrough within 30 days.

Competitive Strength

58

/100

No incumbent closes the full India-specific GenAI loop — that's a real gap. But the moat is thin until outcome evidence, live job-board data, and community trust are built. Global tools can localise quickly. Window is 6–9 months before this advantage erodes.

Investor Readiness

45

/100

Too early for institutional capital. No revenue, no primary validation, no distribution proof. Appropriate for a small pre-seed angel round ONLY after the 30-day gate delivers a positive payment signal. Focus on revenue, not fundraising, until Month 2+.

Aggregate Summary

Dimension	Score	Signal	Next Milestone to Improve Score
Business Viability	62/100	■ Validate	20+ diagnostic completions from non-network users with positive qualitative signal
Revenue Potential	68/100	■ Validate	≥3 real deposits / pre-orders from the smoke-test in Week 3
GTM Strength	52/100	■ Weak	Identify 1 channel that consistently delivers signups without founder personal outreach
Competitive Strength	58/100	■ Validate	First 5 interview callbacks from beta users — this is the moat evidence
Investor Readiness	45/100	■ Too Early	Reach ≥15% WTP conversion + 3 paying customers → then approach angels
COMPOSITE	57/100	■ VALIDATE	30-day smoke-test with real payment signal is the gate

SECTION 5 — VISUAL DASHBOARD

Investment Scorecard — At a Glance

Go-To-Market Flow

Revenue Streams & Pricing Ladder

Top Risk Heatmap

Risk	Likelihood	Impact	Status
Free substitutes erode WTP	■ High	■ Critical	Must validate in Week 3
No distribution breakthrough	■ High	■ High	Test 3 channels Week 1
Founder bandwidth limits execution	■ High	■ High	30-day hard deadline
Global tools localise to India	■ Medium	■ High	Build India moat fast
LLM API costs exceed revenue	■ Medium	■ Medium	Validate unit economics W3
Resume fraud / rejection risk	■ Medium	■ High	Collect callback data Week 2+
DPDP Act compliance gap	■ Low	■ High	Build consent flow Day 1

SECTION 6 — SUSTAINABILITY VERDICT

VALIDATE

Promising but Unvalidated — Proceed to 30-Day Smoke Test

Sustainability Verdict

The AI Career Intelligence Platform addresses a real, well-documented pain in India's fast-growing GenAI hiring market, and the founder's domain expertise gives it a genuine head start over generic tools — but sustainable business viability hinges entirely on one unvalidated variable: whether the target user (a price-cautious SDE-1 burned by a previous bootcamp) will actually hand over Rs. 1,999 for an AI-powered output they could approximate, with effort, using ChatGPT for free. The 30-day smoke test is not optional — it is the business. If $\geq 15\%$ of activated users convert to a real payment (not stated interest), the unit economics, distribution model, and product-market fit hypothesis all become investable. If the conversion rate falls below 5%, the problem is not the product's quality but the category's willingness-to-pay ceiling, and no amount of feature iteration will fix a monetisation model that the market has rejected. The path to sustainability is narrow but achievable: prove outcome lift (interview callbacks), build the India job-board data flywheel before global tools localise, and convert the first 15 paying users into vocal advocates whose testimonials collapse the trust gap for the next 500 — because in this market, peer proof beats any marketing spend.

Metric	Current State	30-Day Target	Green Light Threshold
Waitlist Signups	0 (pre-launch)	100+	$\geq 100 \rightarrow$ proceed
Diagnostic Completions	0 (pre-launch)	20+	$\geq 20 \rightarrow$ proceed
Activation Rate	Unknown	$\geq 25\%$	$< 10\% \rightarrow$ reassess
Willingness-to-Pay Rate	Unknown	$\geq 15\%$	$< 5\% \rightarrow$ pivot or stop
Real Payments Collected	Rs. 0	≥ 5 deposits	≥ 3 payments $\rightarrow$ strong signal
Qualitative Trust Signal	Unknown	Majority positive	'I'd trust this with my resume' from $\geq 60\%$
